

To be able to run program with different corpus and test set , just change the corresponding arguments.

```
$ python3 scriptName.py corpusFile errorsFile testFileMisspelled fileForResults smoothing
```

An example run would be:

```
$ python3 CMPE493_1.py 'corpus.txt' 'spell-errors.txt' 'test-words-misspelled.txt' 'results.txt' 'True'
```
